

Dyslexia Defined

Dyslexia is a specific learning difficulty that makes it harder for some people to read, write and spell. It is not a reading problem, but a problem with the brain's ability to process and understand written language. It is a lifelong condition that affects approximately 10% of the population.

Key Facts

- It is not a reading problem, but a problem with the brain's ability to process and understand written language.
- It is a lifelong condition that affects approximately 10% of the population.
- It is not a reading problem, but a problem with the brain's ability to process and understand written language.

What is Autism Spectrum Disorder (ASD)?

Autism Spectrum Disorder (ASD) is a developmental disability that affects how a person communicates with and relates to other people. It is a lifelong condition that affects approximately 1% of the population.

How is Asperger Syndrome different from Autism Spectrum Disorder?

People with Asperger Syndrome have a high level of verbal ability and are often very intelligent. They have difficulties with social interaction and communication. They are often very interested in specific topics and have a strong sense of justice.
